

20 Most Promising DR & BCP Solution Providers 2018

As businesses have become more reliant on high availability, the tolerance for downtime has decreased. A disaster can have a devastating effect on a business. Studies have shown that many businesses fail after experiencing a significant data loss, but DR can help. With disaster recovery as a service, the time to return applications to production is reduced because data does not need to be restored over the internet. DRaaS can be especially useful for small and medium-sized businesses that lack the necessary expertise to provision, configure and test an effective disaster recovery plan. Using DRaaS also means the organization doesn't have to invest in -- and maintain -- its own off-site DR environment.

Although the concept -- and some of the products and services -- of cloud-based disaster recovery is still nascent, some companies, especially SMBs, are discovering and starting to leverage

cloud services for DR. It can be an attractive alternative for companies that may be strapped for IT resources because the usage-based cost of cloud services is well suited for DR where the secondary infrastructure is parked and idling most of the time. Having DR sites in the cloud reduces the need for data center space, IT infrastructure and IT resources, which leads to significant cost reductions, enabling smaller companies to deploy disaster recovery options that were previously only found in larger enterprises.

In order to help CIOs and CEOs find the right DR & BCP Solution Providers for their enterprise, a distinct panel of CEOs, CIOs, VPs, Analysts and CIOReview editorial board have decided on the names of "20 Most Promising DR & BCP Solution Providers". We hope this list of vendors help strategize the best business continuity plan for the business, thereby fool proofing the organization's data.

Description:

The portfolio comprises solutions for business continuity management, enterprise asset management, software asset management, and IT security management.

Gorisco: The Sustainable Solution for Business Resiliency Intelligence

Jessica Ferguson, Director of Information Security Architecture at Alaska Airlines once said- "If a threat actor targets a vertical like maritime, as an aviation company I may care but may not pay attention, but if there is a history and a pattern for this group to target all aviation we will put extra emphasis on it". When it comes to act upon threat intelligence, the swift nature of digital transformation of business world is its bane and a boon. Bangalore based company; Gorisco builds resilience for comprehensive business growth for today's rapidly changing digital landscape. The nature of business transformation under the purview of risk intelligence, security, governance and compliance needs a potential data sharing, data analysis and adapt to several data-centric operations. Henceforth, the necessity to have a solid and proven infrastructure for business continuity becomes the next logical step. Gorisco's solutions focus on all critical services - Consulting, Assessment, Implementation and Managed Services. Building stronger resilience, governance and compliance structure, the company ensures Business Continuity with Information Security Management, Software Licensing, Enterprise Asset management and IT Disaster Recovery.

A 360 degree Assessment

Gorisco, recently, ensured implementation of ISO 22301 in a Government organization from Aviation sector in GCC region. It was challenging and time critical since the whole implementation had to be completed within two months followed by successful certification of the organization by an external agency. This standard for Business Continuity Management Systems roped in critical aspects of critical business departments, locations, people, processes, services, organizational risks and IT Disaster Recovery for a 360 degree assessment.

Business continuity and Disaster Recovery Plans can reap full potential only when they are executed in tandem. Execution deficiencies do not enable the organizations to reap the total potential and ROI of any initiative. Making execution the core strength of Gorisco, the

company seamlessly connects and reengineers all vertices of the Organizational Transformation.

Gorisco's 'AlertEm' is a solution for mass notifications that helps organizations insure their most critical assets - the people. It is a great enabler to an organization's Emergency Response strategy where AlertEm can provide one-way and two-way alerts on Telecom based (SMS and Voice Calls) as well as IP based technologies (Emails and Mobile app on Android and IOS platforms).

A matured Business Continuity architecture is complemented by a robust Enterprise Asset Management. Being the most critical ones which can impact continuity of business, Hardware and Software Asset Management help organizations manage and track the lifecycle of valuable tangible and non-tangible assets in compliance with various regulatory and statutory requirements.

Future Compliance Technologies

"Gorisco's next horizon will offer innovative solutions for risks and compliance related to future technologies powered by Artificial Intelligence, Cloud Computing and Big Data", says Deepak Singh, President & CEO, Gorisco. The company has established itself as the harbinger of governance, controls, security, compliance and recovery initiatives for enterprises across the globe where compliance and security are speculated to be the biggest challenges and threats of future world.
